Detailed Action

Drawings

The drawings have been approved by an official draftsman.

Objection to the Disclosure

37 CFR 1.163

The following is a quotation of section (a) of 37 CFR 1.163:

(a) The specification must contain as full and complete a disclosure as possible of the plant and the characteristics thereof that distinguish the same over related known varieties, and its antecedents, and must particularly point out where and in what manner the variety of plant has been asexually reproduced. In the case of a newly found plant, the specification must particularly point out the location and character of the area where the plant was discovered.

35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

As specific to United States Plant Patent applications, the specifics of 37 CFR 1.164 (reproduced below) are controlling:

The claim shall be in formal terms to the new and distinct variety of the specified plant as described and illustrated, and may also recite the principal distinguishing characteristics. More than one claim is not permitted.

In plant applications filed under 35 U.S.C. 161, the requirements of 35 U.S.C. are limited. The following is a quotation of 35 U.S.C. 162:

No plant patent shall be declared invalid for noncompliance with section 112 of this title if the description is as complete as is reasonably possible. The claim in the specification shall be in formal terms to the plant shown and described.

The disclosure is objected to under 37 CFR 1.163 (a) and under 35 U.S.C. 112, first paragraph, because the specification presents less than a full, clear and complete botanical description of the plant and the characteristics which define same per se and which distinguish the plant from related known cultivars and antecedents.

More specifically:

A. The specification does not "particularly point out where and in what manner the variety of plant has been asexually reproduced" in the statement of stability through succeeding asexual propagation. Correction is required.

Art Unit: 1661

B. Applicant is advised that the observed plant must reproduce true to type and be stable in successive generations in order to obtain a U.S. Plant Patent for the observed plant. Applicant should set forth a statement in the specification, such as "The observed plant retains its distinctive characteristics and reproduces true to type in successive generations."

C. Applicant should disclose the parents of the observed as stated in the MPEP 1605.

D. Applicant is requested to indicate whether the parent cultivars have been patented in the United States, are currently the subjects of pending U.S. plant patents applications, or not patented. If patented, --(U.S. Plant Patent No.)-- should be inserted after the appropriate cultivar name. If subject of a pending application, such should be referred to by serial number. If not patented, --(not patented)-- should be inserted after the appropriate cultivar name.

E. Applicant should be descriptive with the comparison between the parents and the observed plant, 'Savory' in how they differ from each other.

F. On page 2, in the specification under the "Brief Description of Drawings," Applicant should change the captions provided for the drawings, by replacing them with figure numbers (FIG. 1, FIG. 2, etc.), not "first drawing" or "second drawing" as the photographic illustrations and the specification must correspond to each other in this regard.

G. On page 3, line 1, Applicant should insert a --- after "markets."

H. Applicants should set forth the branch diameter of the observed plant.

I. Applicant should set forth in the specification the trunk diameter (usually measured at a given height above soil level) in the interest of providing as complete a description of the observed plant as is reasonably possible.

J. Page 4, line 4, Applicant should delete the "." and insert ---.

K. On page 5, line 22, the color chart number for 'Neutral Gray' is not Pantone 18-4005. Correction is needed.

The above listing may not be complete. Applicant should carefully review the disclosure and import into same any corrected or additional information which would aid in botanically identifying and/or distinguishing the cultivar for which United States Plant Patent protection is sought.

Claim Rejection

35 U.S.C. § 112, 1st and 2nd Paragraphs

Claim 1 is rejected under 35 U.S.C. 112, first and second paragraphs as not being supported by a clear and complete botanical description of the plant for reasons set forth in the Objection to the Disclosure Section above.
